

## What are **Conduction**, **Radiation** and **Convection**?

This is what your *Pearson Saskatchewan Science 7* textbook says about them:

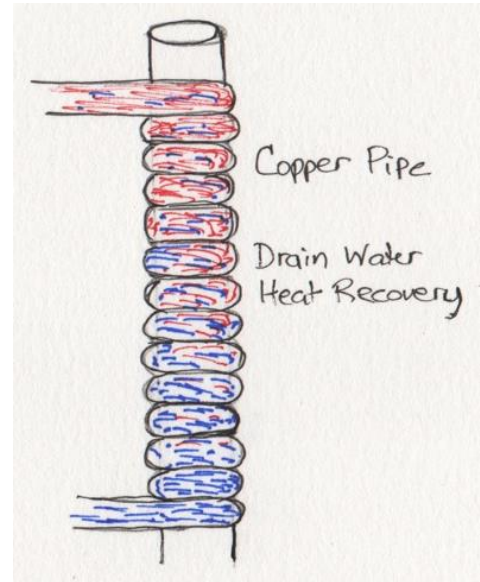

### **Conduction** is:

“The transfer of heat energy between substances that are in contact.”

### **Convection** is:

“The transfer of heat energy that happens when heated gas or liquid particles move from one location to another.”

### **Radiation** is:

“The transfer of heat energy in the form of radiant energy waves.”
